

IS YOUR **DDOS** PROTECTION EFFECTIVE?

THE DDOS RISK IS REAL |

Cybercrime ranks number one among the most common crimes against corporations. According to Microsoft's 2022 Digital Defense Report, cyber-attacks aimed at critical infrastructure worldwide jumped from 20% up to 40% of all nation-state attacks.

Among the most common attacks are distributed denial of service attacks (DDoS), i.e., overload attacks with immense power in which servers, online services or entire networks are flooded with data traffic, which can lead to a complete breakdown.

DO NOT PLAY WITH FIRE |

For optimal protection, accurate detection and speed in defense are the most important factors. This reduces the "time to mitigate" to a minimum and DDoS attacks are successfully blocked.

EFFECTIVE DDOS PROTECTION REQUIRES SPECIALISTS |

We asked Frost & Sullivan to compare. In an independently conducted benchmark study, Link11 achieved by far the **highest precision** in detection and was **more than six times faster** in defending against DDoS attacks than the average of the tested providers.

WE DDoS PROTECT BETTER

- Fast and accurate DDoS protection on all OSI layers
- Easy integration
- 24/7 customer support in English and German
- Transparent reporting
- Always-on filter as default
- Scalable protection bandwidth
- No hidden fees, no time limit in case of an attack
- 100% GDPR compliant

Patented AI-technology in the Cloud. Certified. Secure.

Leading brands are protected by Link11.
